## **Pollution Solution: How to Create IAQ Policies, Plans and Practices to Control Pollutant Sources in Your School District**

This 1 hour training:

- Communicated the importance of preventing IAQ issues and problems before they start by aggressively and comprehensively controlling pollutant sources.
- Prepared participants to manage the critical relationship between pollutant sources, airflow pathways and air pressure to protect occupant health.
- Demonstrated building walkthrough inspections using the *IAQ Tools for Schools* Walkthrough Inspection Checklist to identify potential sources of pollutants.
- Explained how to measure and monitor IAQ pollutant sources; use tools, devices and techniques to gather documentation and interpret data; and effectively communicate findings.
- Identified ways to reduce chemical exposures and costly accidents by establishing a plan for the use, labeling, storage and disposal of hazardous materials.
- Detailed the implementation of policies, plans and practices to improve IAQ and protect occupant health, including such tactics as creating tobacco-free school zones, promoting anti-idling school bus policies, using walk-off mats at building entrances, testing for and mitigating radon, and conducting pollutant-generating activities when school facilities are unoccupied.
